

ingenium,
let your mind flow into
home automation.

INGENIUM

Design and quality always together.

We are a leading technology company, dedicated since 1999 to design, development and manufacture of the highest quality home automation technology.

From the beginning, we were conscious about the need to board this growing market with high standards, and a commitment to strong research and development. This belief in our ability for innovation is the reason why our clients trust in Ingenium and more and more people come to us every year.

Our system is completely open and royalties free; It allows other manufacturers to design devices following our standard, and the development of new devices integration or gateways between different standards.

The products we make are absolutely versatile and intuitive, granting comfort, security, and energetic efficiency, but without forgetting design; all of them basic columns to hold up the concept of home automation we are working with to make our devices successful.

comfort

Because your home should be your rest and relax refuge.

Simply adapt the performance of your home in a simple and intuitive way.

Ingenium reaches an extra comfort value with its range of products fully orientated to provide control over your home and its appliances. Through just one interface (TV, touch screens, PC, internet, remote controls, etc.) we will enable you, manually or automatically, to interoperate with all the appliances in your home; to lower all the blinds at one time, turn the lighting ON and OFF depending on your presence, sunlight levels, irrigation timetable, etc.

Just let us think for you.

Real size: 22,5 x 17 cm

RELAX

Because communication with your home is our bet for present and future.

In real time communication with you, your house will be the one to alert you about any incident (flood, gas leak, burglary, etc.) automatically initiating the appropriate actions to minimize the problem (water or gas cutoff supply, trigger the alarm, etc.) and allowing you to enjoy this feeling of extra peace of mind, knowing that your house is protected 24 hours without interrupting your pace of life.

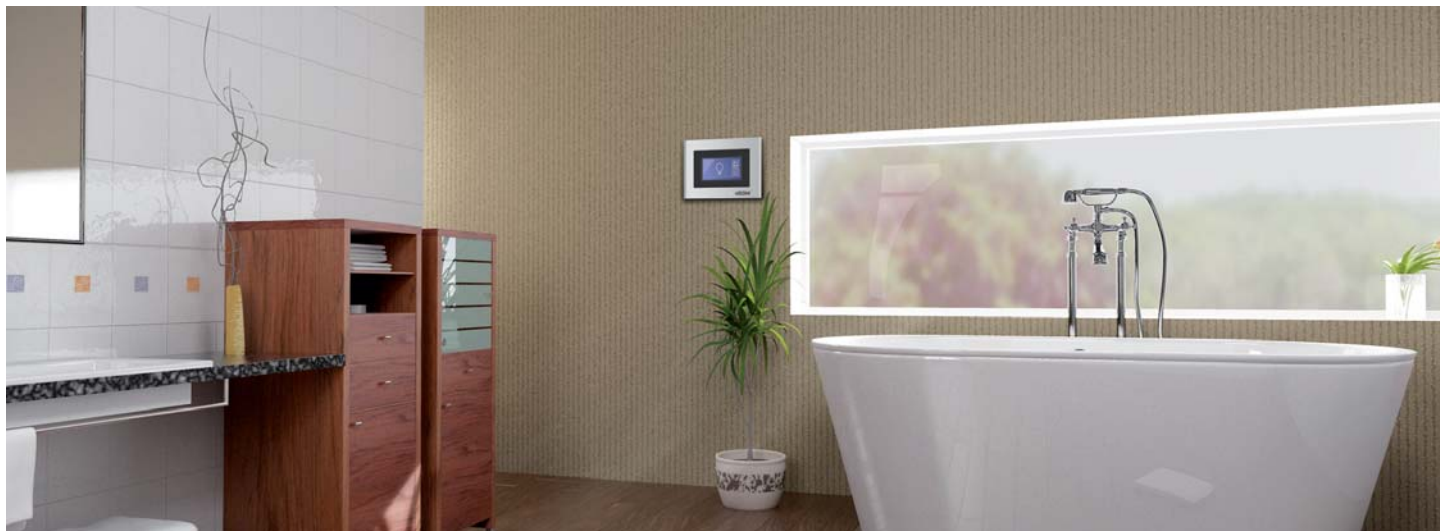

Real size: 15 x 10 cm

security

energy efficiency

Because energy is a limited resource we have to optimize and use responsibly.

Home automation has a special meaning when we talk about energy saving and it adds an exhaustive control of the energy needed to maintain a comfortable environment without high expense. Ingenium devices have smart control over climate, lighting, etc., allowing you to reach the highest comfort standards with a minimum impact over the environment.

Real size: 11,5 x 8,5 cm

CONTROL

Because your personality and tastes should be reflected into your home.

Always seeking for elegant aesthetics to be integrated with the rest of your home environment, is the requirement for any device that aspires to have a key role in your home decoration.

Design is the key to functionality; that's the prime value in which Ingenium designs its products, offering the widest range of possibilities with a contemporary image to make your smart home control system even more attractive.
